CRS Report for Congress: Energy Efficiency in Buildings: Critical Barriers and Congressional Policy: June 24, 2009 - R40670 (Paperback)

By Paul W Parfomak, Fred Sissine

Bibliogov, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.Federal policymakers are debating a range of potential initiatives to limit U.S. emissions of carbon dioxide (CO₂). The American Clean Energy and Security Act of 2009 (H.R. 2454), for example, would set a target of reducing U.S. greenhouse gas emissions, including CO₂ emissions, 17 below 2005 levels by 2020. In the electricity industry, increasing the energy efficiency of buildings is viewed by many as the measure with the greatest potential to reduce CO₂ emissions quickly and at relatively low cost. In light of the efficiency initiatives the federal government has taken since the 1970s, questions arise as to what additional policies might be considered to achieve more ambitious efficiency goals under a national policy of carbon control. In November 2007, a congressionally-mandated advisory committee released a report examining barriers to the deployment of greenhouse gas reducing technologies and practices, including energy efficiency. The report, Carbon Lock-In: Barriers To Deploying Climate Change Mitigation Technologies, identified the following six critical barriers to end-use efficiency in buildings: industry structure, incomplete/imperfect information, high (first) costs, technical risks, market risks, and unfavorable utility...

Reviews

The best ebook i possibly read. I have go through and i also am sure that i am going to planning to read once again again later on. Its been printed in an extremely simple way which is simply after i finished reading through this ebook by which basically changed me, alter the way i really believe.
